

Sail Measurements for Halman 20 (Sam Cioran)

Here are some important instructions from Schaefer for the luff tape size:

Sailmaker's Instructions for Schaefer Snapfurl CF-500

- 1. The required luff tape size is #5 (4mm) (STANDARD & GOOD QUALITY) – CAN NOT BE “HEAVY” #5. The luff diameter must not exceed .160 (4.0mm) diameter. Larger luff tapes will not fit.**
2. Webbing, instead of a grommet, is recommended at the tack and head to avoid bulky furling.
3. A foam luff pad can be installed for reefing deep draft sails.

Additional Notes:

1. There are no reefing hooks on the boom. I use blocks on the mast instead.
2. There are currently no reefing sheaves on the boom. I will add them after I get the mainsail, based on where the sailmaker puts the reefing cringles.
3. Mast track details: the mast track opening is 3/16" and takes 5/16" round slugs.
4. The boom track opening is 3/16" and takes 5/16" bolt rope.
